Art Unit

2611

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 3&4.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: .

## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statements submitted on 06/23/2000 (paper No.3) and 01/17/2002 (paper No.4) were filed on the mailing date of the application 09/524,854. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the petition is granted and the examiner is considering the information disclosure statements.

### ***Specification***

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Regarding the Abstract, it should be in a single paragraph on a separate sheet as stated. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

*(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.*

4. Claims 1-5, 7-13, and 15-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Gordon et al. (U.S. Patent Pub No. 2003/0052905/ or “Gordon” hereinafter).

Regarding claim 1, Gordon discloses “a method for managing delivery of video sequences of an interactive program guide (IPG) over a communications network to a plurality of terminals” (Fig. 1 & 6A-6B, page 2/section 0013, and page 8/section 0082 for a cable television delivery system, as the server system delivers packetized video stream or video packet sequences within an applet to a plurality of terminals or to set top terminals 136 belongs to subscriber equipments 106-1 ...106-n of Figure 1; and page 1/section 0004 for an interactive on-screen program guide addressed), the method comprising:

“pre-allocating a broadcast bandwidth in the communications network for common video sequences to be transmitted by a broadcast technique; transmitting in the broadcast bandwidth the common video sequences to the plurality of terminals by way of the broadcast technique” (i.e., this broadcast technique refers to a standard or common broadcast is provided to a terminal in the communications network whenever there is no specific technique is requested by any

specific terminal or referred to as “non-specific subscriber delivery” by using appropriate bandwidth pre-allocation technique, see page 11, section 0107).

“receiving a request for a specific video sequence from a specific terminal via the communications network; allocating a demandcast bandwidth in the communications network for the specific video sequence; and transmitting in the demandcast bandwidth the specific video sequence to the specific terminal via the communications network” (i.e., this specific technique refers to as per a request for a specific video sequence from a specific terminal, for instance, a pay-per-view show or a particular movie and so on, a demandcast bandwidth is provided to that specific terminal based on the request using a dynamic allocation technique, or namely, “a specific subscriber delivery” such as a point cast technique or a narrowcast technique with an individual interactive information stream is allocated for that specific terminal is provided, see Fig. 20, and page 13/section 0128).

As for claims 2 and 3, in view of claim 1, Gordon further discloses “wherein the common video sequences are delivered using an in-band portion of the communications network” and “wherein the specific video sequence is delivered using the in-band portion of the communications network” (i.e., broadcast video stream including the common video sequences and the specific video sequences, or in other words, packetized video streams, are delivered using an in-band data delivery of the communications network, see page 14, section 0139).

As for claim 4, in view of claim 3, Gordon further discloses “wherein the requests are received using an out-of-band portion of the communications network” (i.e., a request from a user or a terminal is using an outside signaling system or a separate network for communicating to the communications network referred to as using an “out-of-band portion” of the communications network, see page 3, section 0049 for a back channel 134 for providing commands from the user to the system via a telephone network; and as signaling or commands can either provided through an in-band data delivery or an out-of-band data delivery, see page 14, section 0139).

As for claim 5, in view of claim 4, Gordon further discloses “wherein the common video sequences comprise IPG pages for a current time period” (i.e., video sequences comprising IPG pages are presented to the user in real-time with an on-screen navigator for interactively interact with programs/sessions, see page 1, section 0009, and available currently displaying programs are displayed to the user with a program guide for a current time period, if not, a preview is shown, see page 2, section 0016).

As for claim 7, in view of claims 1 above, Gordon further discloses “wherein transmitting the specific video sequence is performed using a narrowcast technique to a group of terminals which includes the specific terminal” (i.e., a narrowcast technique with an individual interactive information stream is allocated for that specific terminal is provided, see Fig. 20, and page 13/sections 0127 & 0128).

As for claims 8, in view of claim 1, Gordon further discloses “wherein transmitting the specific video sequence is performed using a PointCast technique” (i.e., a PointCast service are used for providing information service based on the user request, see page 13, section 0127 & 0128).

Regarding claims 9, in view of claim 1, Gordon further discloses “wherein the PointCast technique comprises a shared PointCast technique” (i.e., a shared pointcast are used for providing information service based on the user request, see page 13, section 0127 & 0128).

Regarding claim 10, Gordon discloses “a method for managing delivery of a plurality of video sequences that comprise interactive program guide (IPG) pages, the method comprising: predetermining a set of video sequences to be broadcast; allocating a broadcast bandwidth within a network with a finite bandwidth for the set of video sequences; broadcasting the set of video sequences via the broadcast bandwidth to a plurality of terminals; receiving a request from a specific terminal for a specific video sequence which is not within the set of video sequences to be broadcast; allocating a demandcast bandwidth within the network for the specific video sequence; transmitting the specific video sequence via the demandcast bandwidth to the specific terminal to fulfill the request” (i.e., see claim 1 above and further with a limitation of “predetermining a set of video sequences to be broadcast” is disclosed by Gordon as an applet containing compressed packetized video stream or video sequences (see page 2, section 0013) are delivered to the set top terminal from the server in a predetermining manner in response to instructions from the user, as an applet for a linked menu waiting at the set top terminal for the user to select or command a selected movie from the server (page 8, sections 0081 & 0082)).

As for claim 11, in view of claim 10, Gordon discloses “wherein the broadcasting and transmitting occur by way of in-band communications in the network, and the receiving occurs by way of out-of-band communications in the network” (i.e., the broadcasting and transmitting occurs as broadcast video stream including the common video sequences and the specific video sequences, or in other words, packetized video streams, are delivered using an in-band data delivery of the communications network (page 14, section 0139) and the receiving occurs as a request from a user or a terminal is using an outside signaling system or a separate network for communicating to the communications network referred to as using an “out-of-band portion” of the communications network (page 3, section 0049 for a back channel 134 for providing commands from the user to the system via a telephone network); and as signaling can either provided through an in-band data delivery or an out-of-band data delivery (page 14, section 0139)).

As for claim 12, in view of claim 11, Gordon further discloses “wherein the first set of video sequences comprises IPG pages for a current time period” (i.e., video sequences comprising IPG pages are presented to the user in real-time with an on-screen navigator for interactively interact with programs/sessions (page 1, section 0009) and available currently displaying programs are displayed to the user with a program guide for a current time period, if not, a preview is shown (page 2, section 0016)).

As for claim 13, in view of claim 10, Gordon further discloses “comprising: predetermining a second set of video sequences to be broadcast; and allocating a second broadcast bandwidth within the network for the second set of video sequences; and broadcasting via the second broadcast bandwidth the second set of video sequences to the plurality of

terminals” (i.e., this technique refers to as per a request for a second (specific) video sequence from a (specific) terminal or a plurality of terminals, for instance, a pay-per-view show or a particular movie, a demandcast bandwidth is provided to that (specific) terminal(s) based on the request using a dynamic allocation technique, or namely, “a specific subscriber delivery” such as a point cast technique or a narrowcast technique with an individual interactive information stream is allocated for that specific terminal is provided (Fig. 20, and page 13/section 0128)).

As for claim 15, in view of claim 10, Gordon further discloses “wherein transmitting the specific video sequence to the specific terminal comprises Pointcasting the specific video sequence to the specific terminal” (i.e., a Pointcast service is used for providing information service to an individual (page 13, sections 0127 & 0128)).

As for claims 16, in view of claim 15 above, Gordon further discloses “wherein transmitting the specific video sequence is performed using a narrowcast technique to a group of terminals which includes the specific terminal” (i.e., a narrowcast technique with an individual interactive information stream is allocated for that specific terminal is clearly provided (Fig. 20, and page 13/sections 0127 & 0128)).

As for claims 17, in view of claim 15 above, Gordon further discloses “predetermining a particular video sequence to be narrowcast to a group of terminals; allocating a narrowcast bandwidth within the network for the particular video sequence; and narrowcasting the particular video sequence via the narrowcast bandwidth to the groups of terminals” (i.e., a narrowcast technique with an individual interactive information stream is allocated for that specific terminal is clearly provided (Fig. 20, and page 13/sections 0127 & 0128)).

As for claim 18, in view of claim 10, Gordon further discloses “comprising: receiving a second request from a second specific terminal for the specific video sequence; and transmitting the specific video sequence via the demandcast bandwidth to the second terminal, wherein the demandcast bandwidth comprises a single stream which is used to transmit the specific video sequence to both terminals” (i.e., Fig. 1 as for illustration of more than two terminals 136 belongs to subscriber equipments 106-1 to ...106-n requesting broadcast services; as if a specific request is sending from a second user of same network, first and second terminals receive one single stream of specific broadcast service to them, for instance, a shared pointcast mode is applied as at least two or more users can receive a (single) particular information stream (page 13, section 0127)).

As for claims 19, in view of claim 18, Gordon inherently discloses “comprising: one terminal from a group including both terminals finishing use of the specific video sequence; and continuing transmission of the specific video sequence via the demandcast bandwidth” (i.e., Since the broadcast technique is used herein based on the user’s preference or their choice either broadcasting, pointcasting, shared pointcasting or narrowcasting; therefore, the user of one of both terminals can do whatever he desires, e.g., ordering a video sequence or a movie, and he stills continue to use the demandcast service if he prefers to order another one, see page 13, sections 0126 & 0127 & 0128).

As for claims 20, in view of claim 18, Gordon inherently discloses “comprising: another terminal from the group finishing use of the specific video sequence; and discontinuing transmission of the specific video sequence; and making the demandcast bandwidth available for re-allocation” (i.e., After the user orders a video sequence or a movie, he/she can discontinue the demandcast service, and making the demandcast bandwidth available for re-allocation for the server system by having the user’s remote controller as for activating a command or not in ordering the demandcast service (page 13, sections 0126 & 0127 & 0128).

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

*(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.*

6. Claims 6 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gordon et al. (U.S. Patent Pub No. 2003/0052905 A1) in view of Allison et al. (U.S. Patent No. 6,262,722/ or “Allison” hereinafter).

Regarding claims 6, in view of claims 5, Gordon does not further disclose the step of “wherein the common video sequences further comprise IPG pages for a prime viewing time period”; however, the technique of providing IPG pages or interactive program guide pages for a specific viewing time period such as a prime viewing time is well-known in the art. In fact, Allison teaches a same technique in offering an interactive program guide system to viewers/users such that the viewer/user can customize their preferences based on a plurality of

choices which includes a setting up of a prime viewing time of day that a particular program or event of interactive program guide can display (i.e., a prime viewing time means time people refers to watch the show the most after back home from work, see Fig. 7/item 108f, col. 7/line 38 to col. 8/line 37 for details on program guide category options and col. 8/lines 9-11 for prime time setting).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Gordon's system with a known technique as disclosed in Allison's in order to provide users/viewers the option to view their prefer layout of category or programs on their interactive program guide as suggested by Allison. The motivation for doing this is to offer a flexible and convenience interactive program guide that offer video sequences, programs or events displaying according to the prime viewing time period as desired.

Regarding claims 14, in view of claims 13, claim 14 is rejected as discussed with respect to claim 6 above.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gordon et al (US Patent 6,584,153 B1 & US Patent 6,481,012) disclose some interactive program guide related to broadcasting techniques.

Gerszberg et al (US Pub 2002/0012353 A1) & Kostresti et al. (US Patent 5,822,324) disclose program guide systems related to simulcasting, and poincasting techniques.

8. **Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks  
Washington, D.C. 20231

**or faxed to:**

**(703) 872-9314, (for Technology Center 2600 only)**

*Hand-delivered responses should be brought to Crystal Park IV, 2121 Crystal Drive, Arlington, VA., Sixth Floor (Receptionist).*

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krista Kieu-Oanh Bui whose telephone number is (703) 305-0095. The examiner can normally be reached on Monday-Friday from 9:00 AM to 6:30 PM, with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Faile, can be reached on (703) 305-4380.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
